EDUCATION

Harvard University — B.S. in Mechanical Engineering, May 2025

Cambridge, MA

Relevant Coursework: Mechanics of Solids, Heat Transfer, Material Science, Mechanical Systems, Computer-Aided Design, Fluid Mechanics, Electrical Engineering, Material Selection and Design, Electronic and Photonic Devices.

Course Assistant: Lead course assistant for the Fundamentals of Heat Transfer course (ES183)

Thesis Project: Led aerodynamic design and validation of Harvard's first Formula SAE car using CFD and composites.

EXPERIENCE

Harvard Undergraduate Automotive Society (HUAS)

Cambridge, MA

Aerodynamics Co-lead

May 2024 – May 2025

- Directed a 6-person team in an agile workspace to design and validate Harvard's first Formula SAE aero package using SolidWorks and ANSYS Fluent, yielding 350 N front-wing downforce and a 6:1 lift-to-drag ratio through CFD and wind-tunnel testing within 10 months.
- Led hands-on fabrication and assembly of carbon fiber aerodynamic components using precision CNC machining and multi-step composite layups.
- Drove material selection, cost analysis, and sponsorship acquisition, raising \$4,000 in sponsorships to support carbon fiber procurement.

Alesi Surgical Ltd (Medical Device R&D)

Cardiff, UK

Mechanical Engineering Intern

May – August 2024

- Developed a new sensor testing rig using SolidWorks and 3D printing that reduced setup time by 60% per test.
- Conducted material testing and analysis for the L-Hook surgical cutting element to address excessive flexibility, selecting a new material that increased surgeon satisfaction from 10% to 100%.
- Executed and analyzed more than 50 smoke-evacuation trials for the IonPencil system, improving data reliability and reducing test variability by 25%.

Aston Martin Lagonda

Cardiff, UK

Mechanical Engineering Intern

April – May 2024

- Observed manufacturing and quality-control processes for the DBX 707 production line, gaining exposure to composite forming and high-precision assembly workflows.
- Documented assembly nonconformities and supported engineers in root-cause analysis to maintain manufacturing standards.

PROJECTS AND SKILLS

3D Holographic Display

Spring 2023

Electrical Engineering with Arduino

- Directed design and programming of an Arduino-controlled volumetric display, synchronizing 120 LEDs at 16 kHz to create an on-demand, stable 3D image in real time.
- Designed a compact 3D-printed mount for Arduino and breadboard integration.

RC Competition Robot

Spring 2023

Mechanical Systems and Control Integration

- Designed and fabricated an RC robot from the ground up with a custom drivetrain and multi-servo manipulator arm, integrating CNC-machined, laser-cut, and lathe-turned components for precise remote operation.
- Placed top 4 out of 16 teams in a team-based robotics challenge.

Other Projects: Balsa Truss Bridge supporting 300lbs (ES120) • Shock-Absorbing Suspension System (ES123)

Skills: SolidWorks • ANSYS • SimScale • AutoCAD • Revit • MATLAB • Python • SQL • CNC Machining • DFMEA

ACTIVITIES

Harvard Track and Field

2021 – 2025

Division 1 Varsity Athlete

- Committed ~25 hours/week to rigorous training as a 400m sprinter, maintaining a strong balance between schoolwork and competing at an elite level, while traveling extensively during the spring semester.
- Served 3 years as the Harvard T&F Chief Marketing Officer, boosting spectator attendance by 30%.
